Alex Morgan Rivera

alex.morgan.dev@email.com | github.com/alexmorgandev | linkedin.com/in/alexmorgandev

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go, SQL
Backend: Node.js, NestJS, Express.js, FastAPI, Django, Spring Boot
Frontend: React, Angular, Next.js, HTML5/CSS3, Tailwind CSS
Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB
Cloud & DevOps: AWS (Lambda, S3, SQS, RDS, ECS), Docker, Kubernetes, Terraform, CI/CD
Architecture: Microservices, Event-Driven, DDD, CQRS, Hexagonal Architecture, SOLID Principles
Messaging & Tools: Kafka, RabbitMQ, GraphQL, gRPC, Datadog, Jira, GitHub Actions

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Meridian Health Technologies – *New York, NY (Remote)* *Jun 2023 – Present*

- Architected and developed a real-time patient data pipeline processing 2M+ daily events from IoT medical devices, enabling clinicians to monitor patient vitals with sub-second latency using Kafka, Node.js, and PostgreSQL.
- Designed and implemented a HIPAA-compliant microservices architecture handling sensitive patient health records (PHI), integrating electronic health record (EHR) systems via HL7 FHIR APIs with end-to-end encryption.
- Reduced API response times by 40% by implementing Redis caching layers and optimizing PostgreSQL query execution plans across 15+ high-traffic endpoints serving 200K+ monthly active users.
- Led the migration from a monolithic Django application to event-driven microservices on AWS ECS, reducing deployment times from 45 minutes to 8 minutes and enabling independent team deployments.
- Mentored 3 junior engineers through code reviews, pair programming, and architecture design sessions, establishing team coding standards and documentation practices.

Technologies: *Node.js, NestJS, React, PostgreSQL, Redis, Kafka, AWS (ECS, Lambda, S3, SQS), Docker, Terraform, Datadog, GitHub Actions*

Full-Stack Developer, Atlas Financial Services – *San Francisco, CA (Remote)* *Mar 2021 – May 2023*

- Developed a credit risk assessment platform processing 500K+ loan applications annually, implementing scoring algorithms that reduced default rates by 12% through integration with third-party credit bureaus and internal financial models.
- Built a real-time transaction monitoring system using Kafka Streams and Elasticsearch, flagging suspicious activity across 3M+ daily transactions for the fraud detection team, reducing false positives by 25%.
- Implemented a payment gateway integration layer connecting Stripe, Plaid, and internal banking APIs, processing $50M+ in monthly transactions with 99.97% uptime and PCI-DSS compliance.
- Designed and developed an internal admin dashboard using React and GraphQL, enabling operations teams to manage customer accounts, review KYC documents, and process refunds 60% faster than the previous workflow.

Technologies: *React, TypeScript, Node.js, Express.js, PostgreSQL, MongoDB, Kafka, Elasticsearch, AWS (Lambda, S3, RDS), Stripe API, Plaid API, Docker*

Software Developer, Nexus Logistics Corp – *Austin, TX* *Jan 2019 – Feb 2021*

- Developed a fleet management system tracking 2,000+ vehicles across 15 distribution centers, implementing real-time GPS tracking, route optimization, and driver hour logging to ensure DOT compliance.
- Built inventory management modules handling warehouse operations for textile and food distribution, processing 10K+ daily SKU movements across reception, storage, picking, and dispatch stages.
- Integrated SAP ERP modules for purchase order management and financial reporting, reducing manual data entry by 70% and improving month-end closing times from 5 days to 2 days.
- Collaborated directly with warehouse managers and logistics coordinators to gather requirements and deliver customized reporting dashboards, increasing operational visibility across the supply chain.

Technologies: *Angular, Python, Django, PostgreSQL, SAP, Redis, Docker, Git, Jira*

Junior Developer, Vertex Software Studio – *Austin, TX* *Aug 2017 – Dec 2018*

- Developed e-commerce features for retail clients using Laravel and Vue.js, implementing product catalogs, shopping cart functionality, and payment integration with Stripe and PayPal.
- Designed and maintained MySQL databases for 5+ client projects, writing optimized queries and implementing data migration scripts for legacy system upgrades.

Technologies: *Laravel, Vue.js, PHP, MySQL, JavaScript, Bootstrap, Git*

PROJECTS

Open Source Contribution: API Rate Limiter Library *2023 – Present*

- Built and maintained an open-source Node.js rate limiting library with sliding window and token bucket algorithms, used by 500+ projects on npm with 2K+ weekly downloads.

Real-Time Chat Platform – Personal Project *2022*

- Developed a scalable real-time messaging platform using WebSocket, React, and Redis Pub/Sub, supporting 10K concurrent connections with message persistence in MongoDB.

EDUCATION

University of Texas at Austin – B.S. in Computer Science *May 2017*
